

João Victor da Silva

Business Intelligence | Data Analyst | Power BI | Python | SQL | ETL | Applied Mathematics | Excel

About Me

Data-driven problem solver skilled in modeling, automation, and analytics. Passionate about transforming data into scalable solutions that make a real difference, deliver measurable impact, and enable smarter business decisions.

Experience

Business Intelligence Analyst

GPC Química

Aug 2024 – Present | Araucária, Paraná, Brazil

- Develop financial and operational analyses for the company's executive board, including income statement, cash flow, and project feasibility studies.
- Led the automation of forecasting processes, standardizing short-term (monthly) revenue and sales predictability models.
- Built the company's annual budget model, integrating Power BI dashboards and SQL-based data pipelines.
- Automated ETL workflows, saving 2 days/week of manual work and improving data reliability.
- Created financial dashboards and data storytelling visuals to support strategic decisions across key business areas.

Skills/Technologies:

Power BI, SQL Server, Python, Financial Analysis, Forecasting, ETL, Tableau.

Data Science

GPC Química

Oct 2023 – Aug 2024 | Araucária, Paraná, Brazil

- Optimized NIR analysis, cutting processing time by 98%.
- Developed AI models reducing manual work by 10%.
- Researched Design of Experiments (DoE) for resin development.

Skills/Technologies:

ETL, Python, Process Optimization, Academic Research.

Software Engineer

Brick Abode

Apr 2022 – Mar 2023 | Remote (U.S.)

- Contributed to Epic Cash cryptocurrency development, focusing on automation, feature creation, and quality control.
- Resolved critical bugs, including coin loss issues, and implemented automated testing workflows.
- Optimized system performance, reducing transaction time by 50%.

Skills/Technologies:

Rust, Blockchain, Test Automation, GitHub, Concurrency, Log Analysis.

Data Analyst – People Analytics

Tereos

Aug 2021 – Apr 2022 | Brazil

- Developed turnover KPIs and maintained employee database.

- Built Power Apps to monitor performance and risks.
- Migrated Tableau reports to Power BI.

Skills/Technologies:

ETL, SQLite, Power BI, Tableau, Predictive Analysis.

Education

Bachelor, Applied Mathematics

Federal University of Paraná

February 2018 - November 2024

Skills

Technical

Power BI / Tableau

Advanced Excel

Python

Rust

SQL

ETL Processes

AI

Machine Learning (TensorFlow, XGBoost)

Statistical, Math and Engineering

Applied Mathematics

Exploratory Data Analysis

Data Pipelines

Process Optimization

Data Automation

Software Engineer

Analytical

Data Storytelling

KPI Development

Statistical Analysis

Data Visualization

Soft Skills

Proactive

Detail-Oriented

Effective Communicator

Leadership

Cross-functional Collaboration

Project Ownership

Languages

Portuguese – Native

English – Fluent

Projects

Note: Interactive dashboards are available in the [online version](#) of this portfolio.

Power BI: Weight Analysis

[Project link: Personal Health](#)

Built a Power BI solution that enhanced data traceability and delivered actionable insights through automated pipelines and time-based analysis.

AI for Breast Cancer Image Classification

[GitHub Repository](#)

Collaborated with doctors and medical laboratory professionals to develop a neural network model for detecting cancer cell density in histological images of breast tissue.

The project reduced manual analysis time by identifying high-relevance images for histological review, contributing to the research workflow of the Experimental Pathology Laboratory at the School of Medicine, PUC-PR.

Technologies: Python, TensorFlow, OpenCV, Scikit-learn, Google Colab.
