

João Victor da Silva

Business Intelligence (BI) & Data Analyst | Analytics Engineer | Power BI (DAX)
· Advanced SQL · Python · ETL · Automation & Pipeline

About Me

I'm a data-driven problem solver passionate about turning complex information into actionable insights. I specialize in modeling, automation, and analytics to build scalable solutions that reduce costs, improve decision accuracy, and accelerate business results.

Experience

Data Analyst (Contractor)

MD Integrations

Mar 2026 – Jun 2026 | Remote (U.S.)

- **Data Modeling & Pipelines:** Built and optimized scalable data models, dashboards, and SQL pipelines to enable reliable, high-performance analytics.
- **Data Quality & Monitoring:** Ensured data integrity and performance across the BI layer, proactively troubleshooting and resolving data issues.
- **Leadership Partnership:** Partnered with cross-functional leaders to define key business KPIs and deliver data-driven insights for strategic decision-making.

Skills/Technologies:

Metabase, PostgreSQL, Advanced SQL, Data Modeling, ETL, Data Quality, KPI Definition.

Business Intelligence Analyst

GPC Química

Aug 2024 – Mar 2026 | Araucária, Paraná, Brazil

- Delivered financial and operational analyses that supported executive decision-making, including income statement modeling, cash flow forecasting, and project feasibility evaluations that guided investment priorities.
- Led automation of forecasting processes, standardizing short-term revenue and sales models that improved prediction accuracy and reduced preparation time for business reviews.
- Built the company's annual budget model, integrating Power BI dashboards and SQL-based data pipelines that provided real-time visibility into business performance.
- Implemented automated ETL workflows that eliminated repetitive manual tasks, saving approximately two days per week and increasing data reliability.
- Created financial dashboards and storytelling visuals that became key tools in board meetings, enabling data-driven decision-making across departments.

Skills/Technologies:

Power BI, SQL Server, Financial Analysis, Forecasting, ETL, Tableau, SAS, PySpark, DataBricks, Scala.

Data Science

GPC Química

Oct 2023 – Aug 2024 | Araucária, Paraná, Brazil

- Redesigned the NIR analysis workflow, reducing processing time by 98% and enabling faster turnaround for sample validation.
- Developed AI models that automated routine laboratory steps, reducing manual effort by 10% and improving data consistency across experiments.

- Applied Design of Experiments (DoE) methodologies to accelerate new resin validation and enhance R&D efficiency.

Skills/Technologies:

PySpark, DataBricks, ETL, Python, Process Optimization, Experimental Design.

Software Engineer (Contractor)

Brick Abode

Apr 2022 – Mar 2023 | Remote (U.S.)

- Contributed to the development of the Epic Cash cryptocurrency platform, focusing on automation, feature creation, and software reliability.
- Resolved critical system failures such as coin loss and implemented automated testing workflows to prevent recurrence of these issues.
- Enhanced system performance and scalability, reducing transaction time by 50% and improving user experience in high-concurrency environments.

Skills/Technologies:

Rust, PySpark, Blockchain, Test Automation, GitHub, Concurrency, Log Analysis.

Data Analyst – People Analytics

Tereos

Aug 2021 – Apr 2022 | Brazil

- Developed turnover KPIs and automated data workflows to give HR leaders real-time insights into workforce trends and attrition risks.
- Created Power Apps for proactive monitoring of performance indicators and risk alerts, enabling faster responses to operational challenges.
- Led the migration of Tableau reports to Power BI, improving report governance and usability for HR managers.

Skills/Technologies:

Power BI, Scala, ETL, SQLite, Tableau, DataBricks, Predictive Analytics.

Education

Bachelor, Applied Mathematics

Federal University of Paraná

February 2018 - November 2024

Skills

Technical

Power BI / Tableau

Advanced Excel

Python

Rust

SQL

ETL Processes

Artificial Intelligence

Machine Learning (TensorFlow, XGBoost)

Statistical, Math and Engineering

Applied Mathematics

Exploratory Data Analysis

Data Pipelines

Process Optimization

Data Automation

Software Engineering

Analytical

Data Storytelling

KPI Development

Statistical Analysis

Data Visualization

Soft Skills

- Proactive
- Detail-Oriented
- Effective Communication
- Leadership
- Cross-functional Collaboration
- Project Ownership

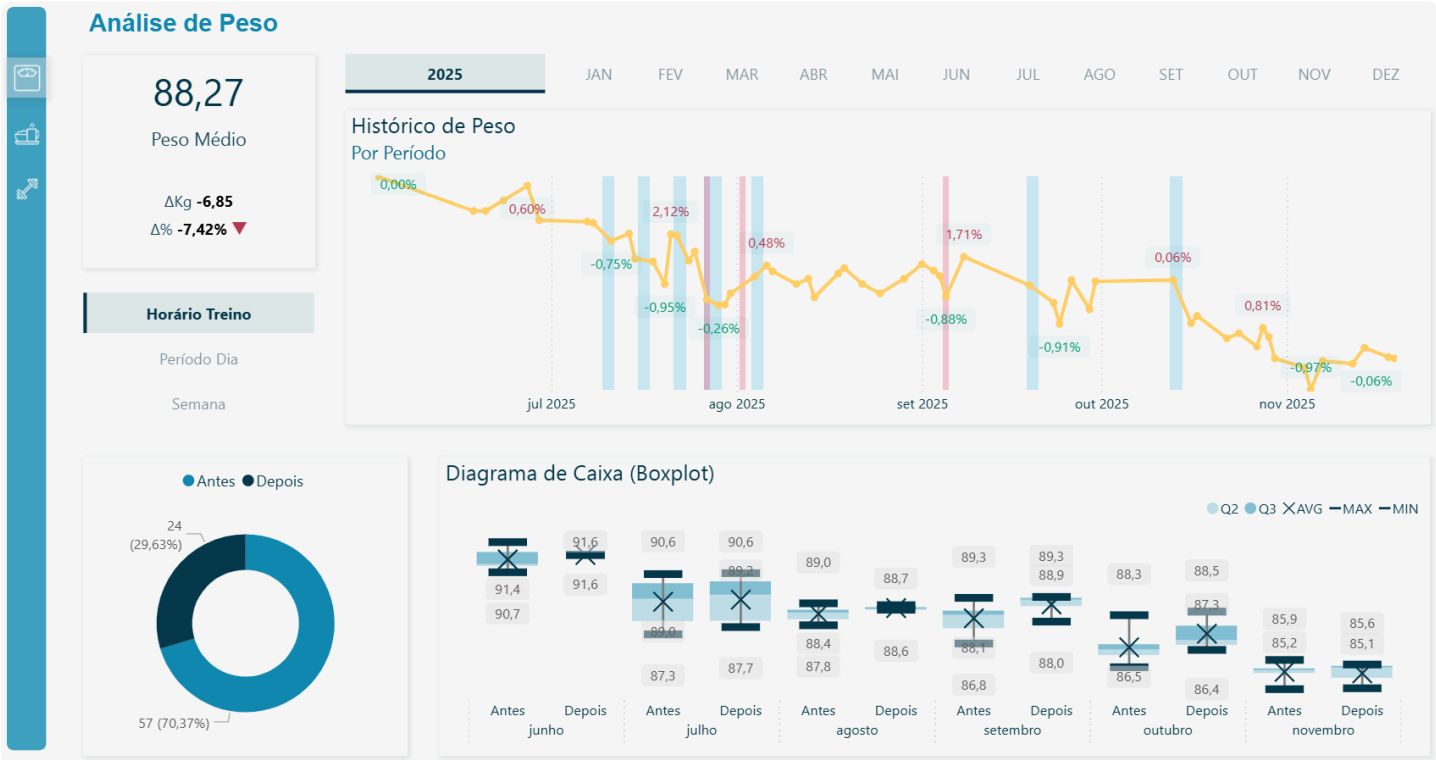

Languages

- Portuguese – Native
- English – Fluent

Projects

Note: A better presentation is available in the [online version](#) of this portfolio.

Power BI: Weight Analysis

Developed a Power BI solution that enhanced data traceability and delivered actionable insights through automated pipelines and time-based analysis, resulting in faster operational decision-making.

AI for Breast Cancer Image Classification

[GitHub Repository](#)

Collaborated with doctors and medical researchers to build a neural network model that identifies high-density cancer cell regions in histological images of breast tissue.

The project reduced manual screening time by prioritizing images for expert review, improving diagnostic workflow efficiency by nearly 50%.

Technologies: Python, TensorFlow, OpenCV, Scikit-learn, Google Colab.
